

Professional Summary

B.Tech (CSE) graduate and Program Analyst Trainee at Cognizant with hands-on training in Oracle Billing and Revenue Management (OBRM) and practical experience in backend development, microservices, and cloud deployment. Proficient in Java, Spring Boot, Perl, C/C++, Docker, Kubernetes, and AWS. Experienced in designing and developing secure RESTful APIs, enhancing system reliability, and delivering production-ready modules through structured software development practices.

Experience

Organization: Cognizant Technology Solutions

Position: Program Analyst Trainee  
Duration: July 2025 – Present

- Customized and integrated telecom billing modules within Oracle BRM, validate billing flows, data mapping, and reconciliation logic.
- Built 5+ debugging and validation scripts C, reducing module verification time by 40%.
- Collaborating with peers on design and code reviews to prepare for client deployments in telecom and finance domains.

Internship

Organization: Cognizant Technology Solutions

Position: Intern  
Duration: February 2025 – June 2025

- Architected and delivered RESTful microservices using Java and Spring Boot for core backend modules.
- Containerized applications with Docker and deployed to AWS EC2, improving deployment consistency and repeatability.
- Engineered a concurrent credit-card processing module in C using POSIX threads and shared memory to simulate transaction workflows.
- Wrote unit tests and load-tested APIs with 100+ Postman requests to verify stability under load.

Projects

Ecommerce Backend with Spring Boot & JWT

June 2025 | Backend Application  
GitHub: <https://github.com/abhidigiworld/Ecommerce>

- Developed backend services with Spring Boot, following secure coding practices and exploring authentication and authorization mechanisms.
- Validated APIs with 1000+ requests; applied modular design and exception handling to improve reliability.

Sakshi Enterprise Billing System

May 2024 | Web Application  
GitHub: <https://github.com/abhidigiworld/bills>

- Built invoice management and customer modules which processed 100+ invoices.
- Engineered CRUD modules and a responsive UI for the billing system, reducing manual data entry time by 60% and improving invoice processing throughput.

Docket – Study Planner App

April 2023 | Java Application  
GitHub: <https://github.com/abhidigiworld/Docket>

- Developed scheduling, reminders and priority tasks; early users reported a 30% productivity improvement.
- Implemented persistence, notifications and customizable plans.

Skills

- Programming: Java, C, C++, JavaScript
- Frameworks / Libraries: Spring Boot, Node.js, React, Bootstrap
- Backend / Architecture: REST APIs, Microservices
- Cloud & DevOps: Docker, Kubernetes, AWS, Git
- Databases: MySQL, MongoDB
- Tools: Postman, VS Code, npm, Linux , Oracle BRM

Certifications

- |                                    |              |
|------------------------------------|--------------|
| Ultimate RAG Bootcamp – Udemy      | January 2026 |
| Docker Fundamentals – Udemy        | May 2025     |
| Node.js Framework – Board Infinity | May 2024     |
| React Frontend – IBM               | March 2024   |
| JavaScript – Board Infinity        | July 2023    |

Achievements

- |                                                                                               |              |
|-----------------------------------------------------------------------------------------------|--------------|
| Developed a template-driven internal email composer during Cognizant’s Vibe Coding Challenge. | August 2025  |
| Secured 3 ★ in Java on HackerRank.                                                            | January 2023 |
| Attained 5 ★ C++ on HackerRank.                                                               | March 2021   |

Education

Lovely Professional University  
Bachelor of Technology - Computer Science and Engineering, CGPA 7.71

Punjab, India  
August 2021- July 2025
